Magnifier App

If it is not on your iPhone or iPad:
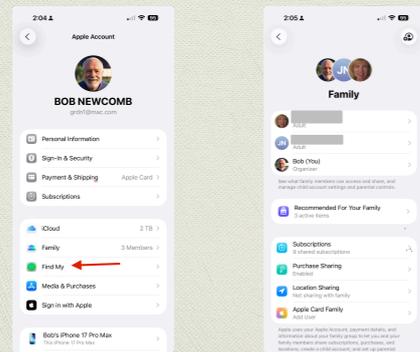

You can add it for free on the App Store

Family Sharing

- Set up a Family Sharing group

  - Warning if purchases are allowed the organizer pays for the purchase

  - Settings > "your name"> Family

- Can add, delete and change privileges

Share Family

Settings > "your name"> Family

Air Drop

Before you begin

· Make sure that the person you're sending to is nearby and within Bluetooth range, and that you both have Wi-Fi and Bluetooth turned on.

· If either of you have Personal Hotspot on, turn it off.

Air Drop

Sending AirDrop files

Choose AirDrop Settings
· Have the receiving iPhone, iPad or Mac to to Settings > General > Airdrop and select on of these settings
  · Receiving off (AirDrop won't work)
  · Contacts only (only those in contacts will see your device)
  · Everyone for 10 minutes (All nearby apple Devices will see your device)

Send contents with AirDrop
· Open an app, find the content you want to share, then tap the Share button. If you share a photo from the Photos app, swipe left or right and select multiple photos.
· Tap AirDrop, then tap the name of the person (or one of your own devices) that you want to share with.
· If both devices are on iOS 17 or later, you can also try holding the devices together to share via AirDrop.

AirDrop

Accepting Content with AirDrop

· When someone shares something with you using AirDrop, tap Accept.

· Wait for the file transfer to complete (indicated by a circle icon slowly filling in). Be mindful that, if you tap the circle twice, it cancels the transfer.

· For most apps, go to the app that the AirDrop was sent from to find the shared content. For example, if someone sent you a photo, go to your Photos app to see it. App links open in the App Store, so you can download or purchase the app

Private Relay

◆ A more secure way to connect to the Internet

◆ Requires at least iOS 15, iPadOS 15 or MacOS Monterey

Private Relay

- Normally when you go to the internet

  - Your internet provider (Spectrum, T-Mobile etc.) knows where you are and what website you are visiting.

  - The website knows your ip address (where you are) and of course knows what you are looking at.

Private Relay

- Private Relay changes that.

- Uses a two step process to hide your activity

Private Relay Dual-hop Architecture

Private Relay

- Settings>"your name">Private Relay

Private Relay

- End Result

  - The internet provider doesn't know where you are going and what you saw or did. They only know your are going to an Apple server (The 1st relay)

  - The Website only know what you did, not where you came from. They only know that the session came from the 2nd relay servers

Sign in with Apple

- When you see a Sign in with Apple button on an app you can sign in with your Apple Account

- You do not need to use a social media account, fill out forms or choose another password.

Sign in with Apple

- The website can only ask for your name and email address.

  - You can use Hide my Email, Apple's private email relay service

- You won't be tracked or profiled. Apple only keeps information to allow you to sign in

- Uses 2FA. You can authenticate with Face ID or Touch ID

Hide My Email

- Service by Apple to give an Apple created a random email address to websites and other people that receive your email and when they send mail back to you it is forwarded it to your real email address

- Requires you to have an iCloud+ (paying at least $.99/month)

- When you create a new account with an app or website, sign up for a newsletter online, or need to send an email to someone you don't know well, you can use Hide My Email to create a unique, random email address.
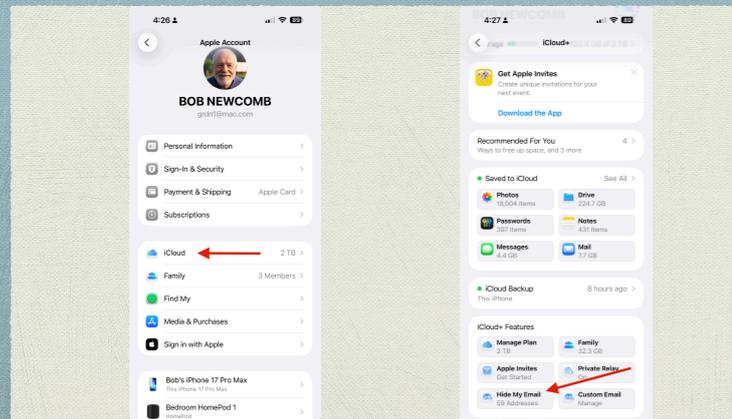

Hide My Email

- You can change the email address that receives the forwarded email at anytime

- You can turn off the email forwarding (either in total or to specific people or entities to stop receiving their email.

- You can manage the addresses created with Hide My Email in settings

Hide My Email

Hide My Email

Privacy Settings

- ◆ Location Services

- ◆ Tracking

- ◆ Apps that have requested access to Apple Apps, functions or hardware

Notes
